

CUBE MOBILE BATCH MIXER - 1.5 YARD

## MOBILE BATCH MIXER

Producing ready-mix from your own portable concrete mixer and batching system will relieve so many headaches on your next project. The CUBE is a proven solution at a variety of jobsites. At a full 1.15M<sup>3</sup> capacity, the CUBE is much larger than other portable mixers, yet is compact enough to move on a flat bed or small trailer to go almost anywhere.

Operators can control batch size, mix design, labor costs and overall ready-mix expenses on every project. On-site batching eliminates short-load fees, reduces labor costs and lost time while waiting for ready-mix trucks, allows you to mix the right quantity of concrete when you need it.

The loading, mixing and dispensing of the concrete materials are all completed inside of the box, reducing the amount of equipment needed at the job-site. The mixing process is simplified by the use of an on-board material loading conveyor. Just load the top-mounted conveyor with the sand and gravel and it will flow into the drum for mixing. Water is metered as it comes in from a simple garden hose connection. The drum spins in both directions for mixing or discharging and the tilting frame allows for dumping the wet concrete into a loader bucket or wheel barrow for distribution.

BUILT TO LAST BY

# MOBILE BATCH MIXER

## SPECIFICATIONS

- 1.15M<sup>3</sup> (1.5 cubic yard) Capacity Drum
- 11 Hp Honda Engine
- Empty Weight: 1588 KG
- Auburn H-D Gearbox
- Ross Hydraulic Motor
- Gearsaver & Uni-body Hydraulic Valves
- 4 Corner Lifting Points & Dual Fork Pockets
- 5 X 20 CM Structural Steel Skids, Full Length
- Frame Mounted 2" towing insert.
- 91 CM by 3 meters sand and gravel conveyor
- Integrated water meter
- Dimensions: 1.22M x 1.98M x 3.35M

## OPTIONS

VINYL DRUM COVER provides an extra level of protection from spillage and protects the drum when not in use.

## FEATURES

- Conveyor Loading System
- Gas/Diesel or Electric
- Digital Water Meter
- Fork and crane pockets
- Tilts to dispense
- Easy to clean
- Low maintenance
- Built for rugged duty

Mobile mixers are extremely flexible:

- Stationary job-site batch plant
- Tow it on a trailer
- Mount it on a chassis
- Hook it with a roll-off system
- Raise it on a platform
- Rail car it into a mine
- Float it on a barge
- Crane it to upper floors
- Mount it on a swivel
- Helicopter place it
- Load it with super sacks
- Attach load-cells
- Mix materials other than concrete

Use your imagination!
